2014 has been a year marked by exceptional achievements. Our success this year was built on a foundation of solid partnerships, effective collaboration and a staff dedicated to fulfilling our mission.

This year brought the implementation of LifeSouth’s blood banking information software (IBBIS) with our industry partner Community Blood Center of the Carolinas. We strengthened efficiency through blood management with our hospital partners. LifeCord, our cord blood bank continues to thrive and expand. We are able to better serve our hospitals through the advantage of our special antigen units and remain firmly invested in our workforce and facilities.

By focusing on the patients whose lives depend on us, we find the drive to accomplish the extraordinary. This success would not be possible without our more than 800 employees, the expertise of our hospital partners, the commitment of our donors and the support of our board and leadership team.

As we serve our community together, we will never forget that we are caring for our families, friends and neighbors. We will meet the challenges in the year to come by providing the best possible care for the patients we serve.

“She’s fantastic. She’s a good leader, she has a cool head on her shoulders and she knows where she’s going.”

-Philip Baker, Chairman of the Board
# MISSION
To provide a safe blood supply that meets or exceeds the needs in each community we serve, and to provide a variety of services in support of ongoing and emerging blood and transfusion-related activities.

# VALUES

# VISION
To be a vital and prominent member of our communities known for meeting the needs of the entire community, incomparable customer service and unwavering employee excellence.

To develop our communities’ blood supply by increasing blood donations from both new and existing blood donors and optimizing component yields from each donation.

To be an employer of choice by providing a work environment that continually reiterates and reinforces the value of each employee’s role and offers opportunities for employee development and growth.

To be recognized as a provider of the safest and highest quality blood components and services by engaging in unrelenting and continuous improvement in our methods and procedures.

LIFESOUTH SERVICES

Active Inventory Management

LifeSouth makes a commitment to our hospital partners to effectively manage their blood inventory. Our hospitals benefit from better patient care, reduced waste and lower costs. In turn, LifeSouth is able to fulfill our promise to our donors. Collaboration allows us all to be responsible stewards of the blood supply. This partnership requires that the hospital rely on LifeSouth for all blood needs while we accept the responsibility of ensuring that they have the blood they need, when they need it. We can make this commitment to our hospitals because we:

- Communicate frequently, anticipate blood needs, and deliver as-needed, providing the highest level of customer service to our hospitals and optimizing our donors’ gifts of life.
- Establish a minimum inventory level for all blood components and ensure these inventory levels are maintained at each hospital we serve.
- Rotate inventory as needed, allowing components which would otherwise expire to be distributed throughout the community. This reduces outdated of components, helping lower costs to hospitals.
- Collect and process blood in each community we serve. This ensures that the freshest blood components are available when they are needed.

Therapeutic Apheresis

LifeSouth offers 24-7 therapeutic apheresis services. In Gainesville, Fla., our nurses partner with physicians to deliver bedside care in hospitals and outpatient clinics. We draw upon more than two decades of experience in delivering these specialized lifesaving services. Our nurses are trained on the latest technology to assist patients needing these transfusion services for leukemia, organ transplants, neurologic conditions and kidney disease. Our nurses are also trained to assist with transfusion services of red cells for sickle cell, leukemia and malaria patients.

Patient services include:

“LifeSouth is invaluable in helping us care for a diverse group of patients at Shands Hospital and UF Health. Inventory is always available and fresh. LifeSouth is able to keep up with the high demands of our trauma, solid organ and bone marrow transplant, as well as our apheresis populations. In addition, LifeSouth has been able to provide specialized units for our sickle cell, leukemia and cardiac surgery patients. The efforts of LifeSouth’s donor recruitment are very evident at both the medical center and throughout the community. We are truly blessed to have a partner in healthcare as committed as LifeSouth.”

Marc Zumberg, MD
Professor and Section Chief Non-Malignant Hematology, University of Florida

UF Health Shands Hospital operates a state-designated Level One Trauma Center with 875 beds and treats more than 2,000 patients a year.
LIFESOUTH SERVICES

Expanded IRL Services

LifeSouth expanded IRL services to Atlanta in 2014 by partnering with QualTex in Atlanta, Ga. QualTex is the largest independent testing lab in the U.S. for donor screening. It provides advanced testing for blood and plasma, reference testing and clinical research. This partnership improves the immunohematology reference services LifeSouth provides by bringing the lab closer to the hospitals we serve.

We take pride in our ability to efficiently provide phenotyped or genotyped red cells for patients with alloantibodies who require antigen-specific units, antigen-negative blood components or HLA-typed blood components. A quick turn-around for hospitals and patients is especially important since we provide more than 150 of these antigen-specific units each week.

Transfusion patients can develop antibodies that make it difficult to find blood that is a viable match. LifeSouth’s immunohematology reference laboratory (IRL) uses state-of-the-art technology and investigational methods to fulfill special patient needs. We do this by identifying donors whose red cells, platelets and white cells have antigens that are compatible with the patient. IBBIS, our FDA-approved software, allows us to identify special donors.

Sickle cell disease patients, for example, require multiple transfusions of specially identified antigen-matched blood. The LifeSouth IRL has two molecular testing platforms, using donor or patient DNA to identify matches. This helps precisely identify a particular patient’s needs for special red blood cell types. Our goal is to meet the needs of our hospital partners and their special-needs patients by having these units readily available.

Transfusions are one of the most commonly performed procedures in hospitals. Every blood transfusion represents a risk for the patient. To avoid unnecessary transfusions, many hospitals would like to implement a patient blood management system that will establish more standardized criteria for determining the necessity of a blood transfusion. Focusing on patient blood management will encourage and assist physicians in making the appropriate medical decisions on a patient-by-patient basis.

LifeSouth evolves to provide the best possible service to our hospital partners and patients. We evaluate our blood supply in new ways to efficiently manage this vital resource. One important aspect of this is a renewed emphasis on patient blood management. LifeSouth is proud to partner with Transfuse Solutions to provide guidance and expertise in blood transfusion as a service to our hospitals.

We work with our partners to ensure smart transfusion decisions and to provide the best care for the patients we serve. Transfusion safety officers act as champions within the hospitals, overseeing blood management, encouraging peer-to-peer teamwork and facilitating the most effective transfusion solutions.

Patient Blood Management

LifeSouth evolves to provide the best possible service to our hospital partners and patients. We evaluate our blood supply in new ways to efficiently manage this vital resource. One important aspect of this is a renewed emphasis on patient blood management. LifeSouth is proud to partner with Transfuse Solutions to provide guidance and expertise in blood transfusion as a service to our hospitals.

Transfusions are one of the most commonly performed procedures in hospitals. Every blood transfusion represents a risk for the patient. To avoid unnecessary transfusions, many hospitals would like to implement a patient blood management system that will establish more standardized criteria for determining the necessity of a blood transfusion. Focusing on patient blood management will encourage and assist physicians in making the appropriate medical decisions on a patient-by-patient basis.

We work with our partners to ensure smart transfusion decisions and to provide the best care for the patients we serve. Transfusion safety officers act as champions within the hospitals, overseeing blood management, encouraging peer-to-peer teamwork and facilitating the most effective transfusion solutions.
“LifeSouth always does a good job of getting us what we need. They are very friendly and when we need a product, they do all they can to get it to us in a timely manner.”

Greg Early, MBA, MT (ASCP)
Blood Bank Manager, Children’s of Alabama

Children’s of Alabama in Birmingham serves patients from every county in Alabama. With more than 332 beds and 48 NICU bassinets, the hospital relies on LifeSouth for red blood cells for its many neonatal patients and specially matched components for sickle cell patients.
LifeCord is a program of LifeSouth Community Blood Centers. Established in 1998, it was the first nonprofit public cord blood bank in the Southeast. LifeCord collects umbilical cord blood from newborns at hospitals in Florida, Georgia and Alabama. There is no cost to donate cord blood to LifeCord.

Cord blood is the blood remaining in the umbilical cord and placenta after a baby is born. It is rich with blood-forming cells. The stem cells found in cord blood replace diseased blood-forming cells with healthy cells. Umbilical cord blood is taken from a healthy baby after its birth and not from an embryo. They are not embryonic stem cells. Life-threatening diseases such as leukemia and sickle cell disease can be treated with a cord blood transplant. LifeSouth received FDA licensure for cord blood manufacturing in June 2013, becoming the fifth cord blood bank nationwide licensed by the FDA. LifeCord partners with the National Marrow Donor Program (NMDP) to provide umbilical cord blood units for patients worldwide. So far, the program has provided cord blood to patients in 28 states and 13 countries.

Not all patients are able to find a match on the NMDP registry. African-American patients have an estimated 34 percent likelihood of not finding a match on the registry. African-Americans are less likely to find a match compared to other races.

Because of the demographics in our geographic location, Health Resources and Services Administration (HRSA) and the NMDP encourage LifeCord to actively recruit African-American donors. We are working to increase the likelihood of African-American patients finding a match by increasing the number of diverse umbilical cord blood units on the registry. Our goal is to partner with additional hospitals in the Southeast with high minority birth rates so that more patients can find their lifesaving match. LifeCord has recently added two new hospitals to help increase cord blood collections. Brookwood Medical Center in Birmingham, Ala., and Jackson Memorial Hospital in Miami, Fla., are LifeCord’s newest partners in saving lives globally.
“Telling a patient they have an incurable disease is difficult, but it’s not the toughest news I have to deliver. It’s even harder telling a patient that cord blood can treat their disease, but that we are unable to find a match for them on the registry. We need more hospitals to collect cord blood for public cord blood banking so that we can help these patients.”

John Wingard, MD, LifeCord Medical Director
Price Eminent Scholar and Professor of Medicine
Deputy Director for Research, University of Florida Health Cancer Center
Director, Bone Marrow Transplant Program
Division of Hematology/Oncology
University of Florida College of Medicine
IBBIS: Integrated Blood Banking Information System

LifeSouth developed this program to manage every step of the blood banking process including:

- Registering donors
- Labeling and tracking blood components
- Managing blood inventory

This FDA (U.S. Food and Drug Administration) approved software system is a one-of-a-kind blood banking management program for use by blood banks. LifeSouth can now provide this service to other blood banks.

It took LifeSouth software developers four years to build the software program from the ground up, beginning with the release of IBBIS 1.0 which was approved by the FDA in 2009. On Feb. 11, 2009, IBBIS registered its first donor and has since registered 1,855,575 donors and counting. The LifeSouth software team monitors, evaluates and continues to improve the software.

In January 2014, IBBIS version 3.0 was approved by the FDA for use by other blood banks. Community Blood Center of the Carolinas (CBCC) was the first blood center beyond LifeSouth to implement the software. The launch took place in March 2014. IBBIS establishes a uniform process for blood management, helping standardize the blood banking industry.

“In working together we accomplished in six months what others wouldn’t have been able to complete in two years,” said Martin Grable, President and CEO of CBCC. “Our collaboration on IBBIS is leading to collaboration in other areas. Having a trusted partner contributes to the learning, development and betterment of both of our blood centers.”

Blood products managed through IBBIS:

CBCC President and CEO Martin Grable and LifeSouth President and CEO Nancy Eckert celebrated the power of collaboration at a Hawaiian-themed IBBIS launch party in March 2014.
“LifeSouth fulfills 100 percent of the blood needs for our 881 bed hospital, which is the only Level One Trauma Center in the area. We also have a large oncology service, open heart, orthopedic specialties, mother/baby and an intensive care nursery. The people at LifeSouth are knowledgeable about the products and services they provide and have courteous, customer service-oriented personnel at all levels of service.”

Debbie Penrod, MT (ASCP), SBB
Blood Bank Manager, Huntsville Hospital

Huntsville Hospital is the second largest hospital in Alabama and the sixth largest publicly-owned hospital system in the nation.
In 2014, the communities we serve and our peers in the blood banking industry honored LifeSouth and our amazing staff.

- University of Florida Physician Dr. John Wingard, one of the pioneers of LifeCord, was honored by FABB as Hospital Medical Professional Advocate of the Year.

- The Florida Association of Blood Banks (FABB) awarded Marion Donor Services Specialist Emilie Williams the Donor Services/Phlebotomy Staff of the Year Award.

- Blood drive partner Florida Division of Corrections Region Two was honored by FABB with a Donor Group Achievement Award and by America’s Blood Centers with the Most Creative Blood Drive Award for its annual Corrections Cup competition.

- Board Vice Chair Reeves Byrd was honored by FABB as Board Member/Trustee/Member of the Year.

- President/CEO Nancy Eckert was honored by Gainesville radio station WKTK with an Inspire Award, which honored “21 women of Inspiration.” She also received the Dorothy M. Hansen Award from FABB.

- LifeSouth and the Five Points of Life Foundation were honored by the Community Foundation of North Central Florida with the Non-Profit Recognition Award.

- Crescent City High School and Palatka High School earned State Champion honors from FABB for their blood drive participation.

- Citrus County Recruiter Pam Egnot was selected Recruiter of the Year by the Association of Donor Recruitment Professionals (ADRP).

- LifeSouth’s Civitan regional hub was honored by the Gainesville City Beautification Board for its extensive renovation.
“We totally depend on LifeSouth. I would fully recommend them. They are highly responsive to our blood needs, as we are a busy trauma center. Their mission is community-based and their organization provides an excellent product at a reasonable cost.”

K. Dino Anastasiades, MD
Blood Bank Medical Director, Atlanta Medical Center

Atlanta Medical Center is a Level One Trauma Center with 762 beds.
OUR MISSION FULFILLED

In the sixth grade, Josh Ibarrientos of Gainesville, Fla., surprised his teacher and his classmates in science class with his answer to the question, “Who knows what cord blood is?” Josh’s hand went up. He had an advantage his teacher didn’t know about: when he was eight years old, a cord blood transplant saved his life. The transplant cured his acute lymphoid leukemia after a six year battle and multiple rounds of chemotherapy.

“They are literally saving someone’s life. I want everyone to know to give blood.”

Caroline Kelley

Now 16, he’s a member of his high school’s robotics team. He’s traveled to China and hopes to go to Europe. His life is filled with joys that wouldn’t have been possible without a mother making the decision to donate her baby’s umbilical cord blood to LifeCord. “I would tell them thank you so much for giving me this second chance in life,” he said.

He also hopes to share an important message with many parents-to-be. “Don’t throw your cord blood away. It can be useful for someone in the future,” he said. “If you don’t believe cord blood can save lives, well, here I am.”

When Cole Kelley of Florence, Ala., was two months old, he was diagnosed with a rare condition called Diamond-Blackfan anemia. Cole’s marrow doesn’t produce the red blood cells needed to carry oxygen to his body. To survive, he gets red blood cell transfusions every three weeks at the St. Jude Clinic in Huntsville Hospital.

“They are literally saving someone’s life. I want everyone to know to give blood.”

Caroline Kelley

For more than two years, countless blood donors have helped Cole survive to be a healthy, active little boy who loves anything involving a ball and has seen the movie “How to Train Your Dragon” at least 100 times.

Cole’s mother Caroline is thankful for all who give. She believes that if others could see the impact of blood donation, convincing them to give would be easier. “They are literally saving someone’s life,” she said. “I want everyone to know to give blood.”
OUr MISSION FULFILLED

Henrietta Slappy of Gainesville, Fla., has a special connection with blood donors. For 66 years, blood donors have helped her live with sickle cell disease. “As far as I know, I’m the oldest sickle cell patient in Central Florida,” she said.

Every month she travels to UF Health Shands Hospital where she receives a transfusion of red blood cells, and in one recent visit, received four units of blood.

“I always tell donors how much I appreciate them. I love them.”
Henrietta Slappy

She requires antigen-specific units from donors whose blood will reduce the complications and reactions that can occur. LifeSouth calls these unique donors Sickle Cell Heroes. Each donor’s blood is tested to see if they are a match for a patient with sickle cell disease.

As the annual report was being finalized, LifeSouth learned that Henrietta had passed away. Her joyful spirit and her willingness to encourage others to donate blood was an inspiration. We are thankful to have met her and her family. Our community will miss her.

When Paisley Roberts was born in 2012, her bright future faced a serious threat. Doctors discovered that Paisley’s aorta was too narrow and there was a hole between the chambers of her heart. Paisley was flown by helicopter from Ocala Fla., to UF Health in Gainesville, Fla., where she received her first of many blood transfusions. Three weeks later, she underwent open-heart surgery. There were complications, including bleeding in her brain, but today she’s healthy and happy.

“People asked us, ‘What can we do to help?’ We tell them to save a child’s life by donating blood.”
Samantha Roberts

Even before Paisley’s birth, Steve and Samantha were blood donors. Seeing how Paisley was helped, they have kept it up and even recommend it to their friends and family members. “People asked us, ‘What can we do to help?’ We tell them to save a child’s life by donating blood,” Samantha said.
